Price 1s. 1d.

To

His Excellency JOHN CAMPBELL, EARL OF ABERDEEN, Lord
Lieutenant-General and General Governor of Ireland.

MAY IT PLEASE YOUR EXCELLENCY,

I am directed by the Vice-President to submit to Your
Excellency the Return of Prices of Crops, Live Stock, and other
Irish Agricultural Products for the year ended 31st December,
1910.

I have the honour to remain,

Your Excellency's faithful Servant,

T. P. GILL,
Secretary.

AGRICULTURAL STATISTICS, IRELAND, 1910.

RETURN OF PRICES OF CROPS, LIVE STOCK
AND OTHER IRISH AGRICULTURAL
PRODUCTS.

TO THE
SECRETARY OF THE DEPARTMENT OF AGRICUL-
TURE AND TECHNICAL INSTRUCTION FOR
IRELAND.

SIR,

I have the honour to submit the following Report on the prices in Ireland of Irish live stock and other agricultural produce for the year ended 31st December, 1910. Tables are submitted with the Report, showing the average prices for the twenty years, 1891-1910, while the quarterly average prices during 1910 are also set forth in separate tables.

The collection of this series of prices was first systematically undertaken by the Irish Land Commission in the year 1887, at which time also a record of prices from the year 1881 was compiled. The work of collecting and publishing these statistics of agricultural prices was subsequently transferred to this Department by the Agricultural and Technical Instruction (Ireland) Act, 1899.

Returns of prices are furnished throughout the year from the following sources :—

For the purpose of Returns of Prices of Live Stock Ireland, outside Dublin, is divided into 24 districts, to each of which a fair reporter has been appointed. All these reporters are expert judges of live stock, and each is required to report upon the more important fairs in his district, a list of which is drawn up by the Department, after consultation with the reporter. The report is posted to the Department on the evening of the fair; is scrutinised in the Department with a view to publication; and copies are issued to the Press. The only live stock for which prices are furnished are cattle, sheep, and pigs.

PRICES OF FAT AND
STORE STOCK.

The report, which opens with a short account of the chief characteristics of the fair, shows the prices obtained for each description of stock, classified according to age and quality, and gives estimates of the number of each class offered for sale and sold.

During the year 1910 there were 664 reports received of fairs held at 173 different towns.

Returns of prices of fat cattle and fat sheep are also obtained for Dublin from the Corporation Market and from Mr. Gavin Low, Auctioneer, and for Belfast from the Corporation Market and from Messrs. Robsons, Limited, Auctioneers. These Returns show the actual weight of the cattle and sheep sold, and the prices paid. From these data the prices per cwt. live and dead weight are calculated. As these Returns, based on live weight, have been systematically obtained since 1887, they afford a valuable record of the fluctuations in the prices of fat stock and of beef and mutton during the past twenty-four years.

Reports on the prices of the chief crops and of other agricultural produce are furnished weekly to the Department by the Officers of Customs and Excise at the following towns:—Dublin, Belfast, Londonderry, Cork, Waterford, Limerick, Galway, Sligo. Reports also of the prices of grass seed and flax are furnished by the Officers of Customs and Excise at Ballymena, Cookstown, Newry, and Cootahill during several months of the year. These officers, with the sanction of the Board of Customs and Excise, furnish particulars of actual transactions at the several towns, and indicate in their reports not only the average price obtained for average qualities, but also the current market prices for superior and inferior qualities of the various articles of produce.

The quarterly and annual averages shown in the statistical tables submitted in this Report are based on the data thus furnished throughout the year. In the detailed tables the "highest" and "lowest" prices are also given. Prior to 1905, "highest" and "lowest" prices are, as stated in previous Reports, the average of the highest monthly prices and the average of the lowest monthly prices. As, however, "average highest" and "average lowest" do not indicate adequately the actual range of prices, the individual highest and lowest prices have been shown since 1905.

In determining the average prices allowance is made for the quantity of each class of produce which is offered for sale. The average obtained is thus not the arithmetical mean between the highest and lowest prices, but represents an average based on the value of the total sales divided by the quantity sold. This method gives the true average price, while the highest and lowest prices indicate the range of prices. The Returns furnished are

carefully compared with independent commercial records and with the official prices, as returned from the markets of Great Britain. A study of the several records of prices brings out the fact that while there are points of variation and difference, due largely to local and temporary causes, there is substantial agreement as to the general level and changes in prices. It should be stated that the prices of agricultural products given in the official tables in this Return relate only to Irish stock and produce.

It may be well also to recall that the work of collecting and compiling comparative prices of agricultural produce is of very considerable difficulty, and allowance must be made for this fact in judging returns and in drawing deductions therefrom. The difficulty is due mainly to local fluctuations in prices, to various standards of quality among articles of produce, to the method of buying and selling live stock by estimate at provincial fairs, and not by ascertained weight as in the Metropolitan Markets, and to the fact that full information as to the total number of live stock sold throughout the year is not available. At the best, it is only possible to obtain representative prices. A record of all markets and fairs is out of the question. On the other hand, it should be remembered that at the present day markets are in much closer sympathy than at earlier times, and changes in the level of prices quickly become general. Where, however, data of prices of produce have been carefully collected at a number of representative centres during the year, and where, as far as possible, continuity of system is maintained in carrying on a record, the changes shown may be regarded as typical, and afford a much more adequate view of the general movement of prices than might be supposed. Similarly, where not only the true average, but also the highest and lowest prices are shown, a good indication of the range of prices is thereby given.

Attention has also been directed in preceding reports to the question of the great changes in agricultural prices which have taken place during the past sixty years. Agricultural prices have risen high and fallen low, and in some commodities the rise and the fall have been less than in others. It is, therefore, of importance to grasp the broad movement of prices, and also the relative changes which have taken place in the case of the principal commodities. Furthermore, prices have become much less local in character. To a large extent they are international, and are subject to influences of supply and demand beyond the control of the home producer. Prices thus furnish the best index of the nature and state of the competition with which the farmer of to-day has to reckon, and prices are the final test which he has to apply in determining what he should produce. Again, modern markets have become highly organised and differentiated, and while international competition

has lowered and levelled prices, standardisation and differentiation of quality have made possible a wide range of prices, and have rewarded the producer who has regard to quality and "finish." And as the difference between the prices in the different qualities of an article bear often little relation to the respective costs of production, this question of quality and finish deserves the greatest attention from farmers. Formerly prices at local and central markets varied widely, but each year this tendency becomes less as information improves. To-day the cause of the wide range in prices is the attention paid to the production of quality, to careful grading and packing and to the time at which articles are placed on the market. Also, with the advent of cold storage and of foreign and colonial supplies, certain classes of produce have been, to a large extent, displaced, such as the winter salt butter trade, and the farmer has to consider closely how he can adapt his production so as to obtain the full advantage of the best prices in the home market. Thus the question of marketing in the proper way and at the proper time is now as important for the farmer as attention to improved methods of growing crops and breeding and feeding of live stock.

In order to bring together in a handy form an extensive record, from which at least a broad comparison of

IRISH PRICE
RECORDS.

prices can be made, there are submitted in the Appendices (pp. 82-89) two records which are of special interest to Irish farmers. In Appendix II. a table is given showing the average of highest and lowest prices from 1847 to 1890. This table, up to and including the year 1886, is based on the prices published in *Purdon's Irish Farmers' and Gardeners' Almanac*, and supplies materials for a period during which there were no continuous official returns. In Appendix III. is given the record of the prices of oxen and heifers, wethers and ewes at the Ballinasloe Great Fair since 1841, as published annually in *Thom's Directory*. In view of the importance of the store stock trade to Ireland, and of the outstanding position which the Ballinasloe Great Fair has held as a market for store stock, this table is of special interest and value.

The main changes which have taken place respectively in the prices of crops, live stock, and other agricultural produce during the past sixty years have been traced in the Report for 1906-1907. Compared with the range of agricultural prices during the past twenty years the year 1910 was on the whole favourable. The particulars of the movements of prices in the chief classes of live stock and farm produce will be noticed in detail, but it is of some advantage first to take a general outlook by summarising shortly the main changes as compared with 1909. In 1910 there were decreases in the prices of wheat, oats, and barley, and a marked decrease in grass seeds. On the other hand, there were increases in the prices of potatoes and hay, and a considerable increase in the price of flax.

The following table shows the average prices of farm crops for the year 1910 compared with 1909 and the decennial prices for the past two decades :—

STATEMENT OF AVERAGE PRICES OF CROPS for the periods 1890-1899, 1900-1909, and for the years 1909 and 1910.

Description.	Period.

* Not separately recorded prior to 1894.

† No quotations prior to 1893.

The movement of live stock prices also was not without striking features in 1910. In the cases of cattle prices the improvement which has been shown in recent years was maintained and increased. If one takes the finished article the live weight prices of fat stock in 1910 showed an advance of 3 per cent. on 1909. In stores, if we take the case of two year old stock, which represents the most typical class, the advance indicated was approximately 5·3 per cent. The live weight price of fat sheep, which had fallen over 16 per cent. in 1909, increased by nearly 19 per cent. in 1910, and was nearly as high as in any year during the last twenty, with the exception of the record years of 1906 and 1907; and the price of lambs and two year old store sheep, which fell 11 and 16 per cent. respectively in 1909, increased 6 and 3 per cent. respectively in 1910. The average price for one year old store sheep was the same for both years. The price of pork, which advanced 15 per cent. in 1909 as compared with 1908, showed a further increase of 9 per cent. in 1910. Thus, the live stock and dead meat markets were highly satisfactory in 1910. The price of wool was the highest recorded for any of the last twenty years, except for the years 1905, 1906 and 1907.

With regard to dairy produce, the price of butter, taking all classes, and allowing an estimate for the portion respectively of creamery, factory, and farmers' butter, was the highest recorded since 1892, with the exception of 1908. The price of eggs, which had steadily increased each year from 1903 to 1909, showed a slight decrease in 1910.

The following table shows the average price of live stock, dead meat, dairy produce, etc., for the years 1909 and 1910, and also the decennial averages for the last two decades:—

STATEMENT OF AVERAGE PRICES OF LIVE STOCK, MEAT, PROVISIONS, &c., for the periods 1890-1899, 1900-1909, and for the years 1909 and 1910.

* Purdon's figures for years 1890-1892.

Thus, taking everything into account, it may be said that the level of the prices of Irish agricultural products in 1910 was very favourable, as compared with recent years. A more detailed statement, with comparisons of the movement of prices of crops, stock, and dairy produce during the year 1910 is made in the following paragraphs.

I. CROPS.

In 1910 there was an increase in the area of wheat sown in Ireland as compared with 1909, and the average area for the ten years, 1900 to 1909. The yield per acre, however, was, owing to unfavourable weather, considerably below that of 1909, though higher than the average for the decennial period, 1900-1909. The total production in 1910 was lower than in 1909, notwithstanding the increased area sown. Sales of the new grain commenced in the second week of September, the prices realised being considerably lower than in 1909. The average price for the quarter ended 30th September, 1910, was 7/1½, as against 7/11½ in 1909. During the quarter ended 31st December, prices again showed a marked decrease, the average being 6/9½ in 1910, as compared with 7/8 in the same quarter of 1909. The yearly

average prices for 1910 amounted to $7/0\frac{1}{2}$, as against $7/8\frac{1}{2}$ in 1909, but it was, nevertheless, better than the average during the past twenty years, the average for the ten years, 1900-1909, being $6/11$ per cwt.

In the quarter ended 31st March, 1910, the average price of white oats was $6/2\frac{1}{2}$, as against $5/11\frac{3}{4}$ in the corresponding quarter of 1909. Prices, however, fell, and in the quarter ended 30th June were lower than in the corresponding quarter of 1909, being $6/6\frac{1}{2}$, as against $7/8\frac{1}{2}$. The prices in the third and fourth quarters were also lower than in the corresponding periods of 1909, being $5/10\frac{1}{4}$, as against $6/10\frac{3}{4}$ in the third quarter and $5/6\frac{1}{2}$ in the fourth quarter, as compared with $6/1$ for 1909. Taking the average for the year 1910, the price of white oats amounts to $5/10$, as compared with a like average of $6/5\frac{1}{2}$ in 1909, and of $6/2$ for the ten yearly period, 1900-1909.

The prices of black oats showed a similar variation as compared with the corresponding prices of the previous year. For the quarter ended 31st March, the average price was $6/0\frac{1}{2}$ per cwt., as against $5/5\frac{3}{4}$ in 1909; for the quarter ended 30th June, 1910, the price was $6/3$, as against $7/2$ in 1909. For the quarter ended the 30th September, 1910, the price was $5/0\frac{3}{4}$, as against $5/7$ in 1909; and for the December quarter $5/0\frac{1}{2}$, as against $5/5$ in 1909. The average for the year 1910 was $5/2\frac{3}{4}$, as compared with $5/7$ in 1909.

The condition of the market in 1910 was thus very far from satisfactory, and in addition the average yield per acre fell from 18·7 cwts. in 1909 to 17·5 cwts. in 1910. This yield, however, was better than the average for the ten years 1900-1909, which was 16·5 cwts. In spite of a considerable increase in the area under oats, the total production was less than in 1909, and this was, unfortunately, accompanied by a drop in prices.

The area of barley in 1910 was also greater than in 1909, but the substantial decrease in the average yield per acre gave a smaller crop than that of the preceding year. The average yield per acre and the average price in 1910 was lower than the yield and average price for the ten years 1900-1909. Sales of barley in 1910 opened in the first week of September, and were lower than in 1909. The September quarter averaged $6/11\frac{1}{2}$, as against $7/4\frac{3}{4}$ in 1909. For the quarter ended 31st December, $6/11$, against $7/1\frac{1}{2}$ in 1909, the average price for the year 1910 being $6/11$, as against $7/3\frac{1}{2}$ in 1909, and $7/1\frac{1}{2}$ the average for the ten years 1900-1909. Thus though the area under wheat, oats, and barley were greater than in 1909, the total production of each was less, and this was accompanied by a fall in price of each of these three cereals.

There was an increase of over 18,000 acres in the area under potatoes in 1910 as compared with 1909, but in consequence of a diminished average yield per acre, the total production was less.

POTATOES.

The following were the average prices per cwt. obtained for Irish potatoes during each quarter of 1910 and 1909:—Quarter ended 31st March, 1910, 3/0½, 1909, 2/8; quarter ended 30th June, 1910, 3/3, 1909, 3/2½; quarter ended 30th September, 1910, 3/5½, 1909, 3/1; quarter ended 31st December, 1910, 3/3½, 1909, 2/6; from which it appears that the average price in each quarter was higher in 1910 than in 1909. The average price for the year 1910 was 3/3 per cwt., as compared with 2/10½ for 1909, and 3/2½, the average for the ten years 1900-1909.

The acreage under and the average yield per acre of hay was considerably greater in 1910 than in 1909, and prices also showed a considerable increase. The price was the highest recorded for any year since 1892. The following table shows the averages per cwt. obtained for hay during each quarter of 1910 and 1909:—

QUARTER ENDED.	CLOVER HAY.		MEADOW HAY.	
	1910.	1909.	1910.	1909.
	s. d.	s. d.	s. d.	s. d.
31st March,	4 9½	3 5½	3 8½	2 4
30th June,	4 7	4 3½	3 5½	2 7½
30th September,	3 4½	3 7	2 6	2 5½
31st December,	3 7	4 2½	2 5½	3 1½

Prices in the first two quarters were accordingly better than in the corresponding quarters of 1909, but lower in the third and fourth quarter.

The prices of both perennial and Italian rye-grass were lower in each quarter of 1910 than in the corresponding quarter of 1909. For the quarter ended 31st March the price of perennial was in 1910 14/6½ per cwt., as against 19/4½ in 1909; for the quarter ended 30th September, the price of perennial averaged 13/6½ in 1910, as against 15/6½ in 1909, and the price of Italian 17/7½, as against 19/1 in 1909; for the quarter ended 31st December the average price of perennial was 12/7½, as against 15/5½ in 1909; and of Italian, 17/-, as against 19/8½ in 1909.

The area under flax in 1910 showed a considerable increase as compared with 1909—being 45,974 acres in 1910 and 38,110 in 1909. The average yield per acre was also better, being 309 stones per acre in 1910, as compared with 30¼ stones in 1909. In addition, a record price was realised. Thus, 1910 was a

FLAX.

highly satisfactory year as far as flax-growers were concerned. The average price for the year 1910 was 8/8½ per stone, as compared with 7/1½ in 1909. The price for the quarter ended 31st March was 8/0½, as compared with 6/9 in 1909; for the quarter ended 30th September, the price was 7/9½, as compared with 6/11½ in 1909; and in the last quarter of the year the price was 9/0½, as compared with 7/4 in 1909.

II. LIVE STOCK AND OTHER PRODUCE.

The prices of fat cattle compared favourably in 1910 with those of 1909. The average price of fat
FAT CATTLE. bullocks was returned at £18 5s. 4d. per head, as compared with £17 19s. 9d. in 1909; the average of fat heifers at £16 2s. 6d., as against £15 18s. 8d. The general average price, live weight, was 34/4, as against 33/1 in 1909, and was the best average since 1902. Again, taking the class of fat bullocks at Dublin Market, the average live weight price was returned at 34/4, as against 33/3 in 1909, the top price being 50/- per cwt. Prices in the first quarter of 1910 averaged 33/8 per cwt., live weight, against 33/2 in 1909. In the second quarter, ended 30th June, the average price was 38/3 per cwt., live weight, as against 34/9 in 1909; while in the third quarter, ended 30th September, prices averaged 35/5, as against 33/4 in 1909. For the quarter ended 31st December, prices averaged 32/1, as against 31/9 in 1909.

Prices of store cattle were also exceptionally favourable in 1910. The prices of each of the four
STORE CATTLE. classes recorded, one year olds, two year olds, three year olds, and springers, advanced in price each year since 1906, and were higher in 1910 than in any year during the last twenty years. The prices were—for one year olds, £8 0s. 1d., as against £7 11s. 5d., in 1909; for two year olds, £10 17s. 8d., as against £10 6s. 7d., in 1909; for three year olds, £13 3s. 5d., as against £12 18s. 0d., in 1909; and for springers, £15 3s. 0d., as against £14 10s. 5d., in 1909. The prices for each of the four classes was higher in each quarter of 1910 than in the corresponding quarter of 1909, with the exception of one year olds, which fetched the same price in the first quarter in 1910 and 1909, and of three year olds and springers, in the second quarter.

The price of fat sheep, which fell in 1907, 1908, and 1909, showed a satisfactory rise in 1910, when
FAT SHEEP. the average price for the year was 36/11 per cwt., live weight, as against 31/1 in 1909. The advance was shown in each quarter, the price for the quarter ended 31st March being 39/6, against 32/2 in 1909; for the quarter ended 30th June, 41/10, against 34/4 for 1909; in the quarter ended 30th September, 38/6, as against 30/- in 1909; and in the last quarter, 32/1, as against 28/5 in 1909.

The prices of store sheep were also satisfactory in 1910. The price of lambs for the year averaged 24/2, as against 22/9 in 1909; the price of store sheep, one to two year olds, 33/7 in 1910, and also in 1909; and of store sheep over two years old, 33/10, as against 33/1 in 1909. The prices of the three classes were particularly favourable in the first, second, and fourth quarters of the year. The prices in the third quarter were not so satisfactory, being, for lambs, 23/1, as against 20/7 in 1909; for store sheep, one to two years old, the prices were actually lower, being 30/4, as against 31/10 in 1909; for store sheep over two years old, the price was 30/10, as against 30/6 in 1909.

The price of pork showed a further advance in the year 1910, being 60/3 per cwt., as compared with 55/3 in 1909, and is the highest annual average on record in this series of returns. The price for the first quarter averaged 60/2, as against 48/10 in 1909; for the second quarter, 61/3, as against 56/3 in 1909; for the third, 64/5, as against 59/8; and for the last quarter, 55/11, as against 56/2 in 1909.

The prices of butter in 1910 maintained a higher level than in 1909. The returns of prices of creamery butter showed an average of 106/9 per cwt., as compared with 104/9 in 1909. Factory butter showed an average of 94/6, as compared with 90/1 in 1909, and farmers' butter an average of 94/0, as compared with 89/7 in 1909. Unfortunately, while the year was one of the best in recent times as regards prices, the output of butter showed a falling off. The average for creamery in the quarter ended 31st March was 122/5 per cwt., as against 109/3 in 1909; the average for factory, 106/4, as against 91/2 in 1909; and the average for farmers' butter, 112/1, as against 95/7 in 1909. During the second quarter, ended 30th June, the average price for creamery was 104/9, as against 99/7 in 1909; the price for factory, 95/8, as against 86/11 in 1909; and the price for farmers' butter, 94/-, as against 86/8 in 1909. During the third quarter, ended 30th September, the price of creamery was 105/1, as against 104/- in 1909; the price of factory, 92/3, as against 90/1; and the price of farmers' butter 90/11, as against 88/6. In the fourth quarter, ended 31st December, the average price of creamery butter was returned at 108/4, as compared with 113/8 in 1909; the average of factory butter at 93/6, as compared with 95/1; and the average of farmers' at 94/1, as compared with 94/8 in 1909.

Taking the year all round, the average price of eggs in 1910 was below that of 1909, viz., 8/9 $\frac{3}{4}$ per 120, as against 9/- in the preceding year. The average price for each quarter, except the last, was also lower than in 1909. For the quarter ended 31st March, the average per 120 was 9/1 $\frac{1}{2}$, as against 9/11 $\frac{1}{2}$ in 1909; the average for the quarter ended 30th June is 6/11 $\frac{1}{4}$, as against

$7/3\frac{1}{2}$; but for the quarter ended 30th September the average price is almost identical with that of 1909, viz., $8/6\frac{1}{2}$ in 1910, as against $8/5\frac{1}{2}$ in 1909. In the last quarter, ended 31st December, the average price in 1910 rose to $13/7$, as against $12/4\frac{1}{2}$ per 120 in 1909.

Wool prices in 1910 were satisfactory. The average price for the year was $10\frac{3}{4}$ d. per lb., as compared with $10\frac{1}{4}$ d. in 1909, and $7\frac{3}{4}$ d. in 1908.

The average price for the first quarter was $10\frac{3}{4}$ d., as against $9\frac{1}{4}$ d. in 1909; in the second quarter, $10\frac{3}{4}$ d., as against $9\frac{3}{4}$ d. in 1909; in the third quarter, $10\frac{3}{4}$ d., as against $9\frac{3}{4}$ d. in 1909; and in the last quarter, $11\frac{1}{4}$ d., as against $10\frac{3}{4}$ d. in the corresponding quarter of 1909.

Attention is directed to the various diagrams presented in the Appendix to the Tables, as these show in a simple and clear form the bold changes which have taken place in the prices of the several commodities during the past twenty years. Diagrams are also included, showing the weekly average prices of butter and eggs, as the great variation in the summer and winter value of these articles is a matter of very practical interest.

I have the honour to be,

Sir,

Your obedient Servant,

THOMAS BUTLER,

*Superintendent of Statistics
and Intelligence Branch.*

DUBLIN CASTLE,
31st August, 1911.

SIR,

I have to acknowledge the receipt of your Letter of the 29th instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Return of Prices of Crops, Live Stock, and other Irish Agricultural Products, for the year ended 31st December, 1910.

I am,

Sir,

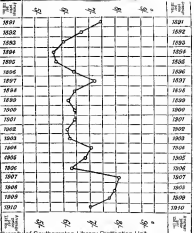

Your obedient Servant,

J. B. DOUGHERTY.

THE SECRETARY,
DEPARTMENT OF AGRICULTURE
AND TECHNICAL INSTRUCTION FOR IRELAND,
DUBLIN.
